Flow Control – Solid lubricants for the Iron, Steel and Refractory Industry
FUCHS has developed, produced and sold lubricants and related specialties for more than 80 years – for virtually all applications and sectors. With over 100,000 customers and 50 companies worldwide, the FUCHS Group is the world’s leading independent lubricant supplier.

Within the FUCHS Group, FUCHS LUBRITECH is the expert for Special Application Lubricants. A team of more than 500 specialists around the world work to meet your needs. However demanding the application, we offer a specialised solution. Service is a crucial and fundamental component of our offering. Our experts offer on-site technical consultation to assure performance, efficiency and process reliability.

FUCHS LUBRITECH special application lubricants stand for highest performance and sustainability, safety and reliability, and efficiency and cost savings. They represent a promise: technology that pays back.

**Facts and Figures**

**Company:** FUCHS LUBRITECH GmbH, part of the FUCHS Group, based in Kaiserslautern, Germany

**LUBRITECH:** the Special Application Division of the FUCHS Group

**Product range:** LUBRITECH GROUP offers a full range of more than 1,000 special products, including food grade lubricants, adhesive lubricants, lubricating fluids and greases, pastes, solid film lubricants, concrete release agents, aerosols and metal-forming lubricants

**Certifications:** ISO 9001: 2008, ISO 21469, Halal, Kosher
The high temperatures and pressures as well as the extreme environmental conditions in steelmaking necessitate the use of special lubricants, which are used on high-temperature and pressure-stressed joints and bearings, fastening and motion threads, roller bearings (as minimum quantity lubrication), sliding mechanisms, on the surfaces of ceramic sliding plates, as release assistance for the secondary ceramic components in slide gate systems, gas purge systems and in many other places in the production process.

We offer an extensive product range that comprehensively meets the demands placed and helps steelworks and refractory manufacturers to substantially improve the durability and performance of their products and plants, decrease downtimes and maintenance work and thus to increase the profitability of their plants. You can rely on our expert knowledge in the fields of development, consulting and support.
Table of contents

08  Product and application range of the MOLYPAL® 900 and 700 series
09  Surface coating of ceramic sliding plates
10  Surface coating of secondary ceramic components
11  Hot-spraying on ceramic surfaces
12  Coating of continuous casting moulds
13  Release of fireproof ceramic products, casting templates and moulds
14  Overview of products and applications
Main fields of application

- Surface coating of ceramic sliding plates
- Cold surface coating of sealing surfaces of secondary ceramics
- Separation of ceramic wearing parts after use
- Hot-spraying on ceramic surfaces in steelworks
- Coating of casting moulds for the production of prefabricated ceramic components
- Mould release (casting templates), e.g. fireproof ceramic dry-setting mixes
- Coating of continuous casting moulds for start-up assistance and wear protection (continuous casting plants for billets and blooms, slabs and thin slabs)

Product and application range of the MOLYPAUL® 900 and 700 series

The MOLYPAUL® 900 and 700 product series contain lubricant variants based on synthetic and natural graphites, which are used as coating and parting lubricants in the production plants of refractory manufacturers and in the “flow control” area of the iron and steel industry.

Coating with high-performance lubricants improves the durability of the ceramic sliding plates, increases their safety in use in the steelworks and thus contributes to a reduction in maintenance costs and possible downtime costs. Thanks to their high resistance to oxidation and a low coefficient of friction, the products from the MOLYPAUL® 900 series make a substantial contribution to this.

Surface coating of ceramic sliding plates

- Spray-coated sliding plate surface
- Cold coating of sealing surface of ceramic sliding ladle nozzle
- Manual surface coating of ceramic plate
- Surface spray coating of ceramic plate
- Manual surface coating of ceramic sliding plates
- Surface coating (spraying) of linear sliding plate

Surface coating of ceramic linear sliding plate

MOLYPAUL® 900/50, MOLYPAUL® 900, MOLYPAUL® 919, MOLYPAUL® 942 FAV
- Water-based, paste-like products
- Dense, oxidation-resistant wearing layer is created
- Application with a sponge, brush, spatula or fibre roller

Ceramic plate coating

MOLYPAUL® 912
- Paste-like product
- Low-friction, oil-based emulsion for use on rotary sliding valve ceramic plates
- System-related tolerance differences and surface unevenness are compensated
- Lubricant is applied directly after installation into the slide valve mechanism
- Application with a sponge, brush or fibre cloth

Surface coating of linear sliding plate

MOLYPAUL® 950, MOLYPAUL® 930
- Water-based, sprayable products
- High-performance, abrasion-resistant lubricating film is created
- Surface is low-friction and resistant to oxidation
- Application with a manual spray gun or an automatic or semi-automatic spraying device
Surface coating of secondary ceramic components

The paste-like MOLY-PAUL® products fulfil this task, dry out at room temperature after application and close the open pores in the ceramic surface.

The wettability is lowered and prevents the penetration of the grout into the pore structure of the component. The wearing parts and any remaining grout residues are easy to remove.

Cold coating of the sealing surface

MOLYPAUL® 900

• Product is applied to the sealing surface of the ceramic sliding ladle nozzle
• The high release effect enables the easy and quick exchange of the head plate, which is bonded by a grouted joint
• Adhering grout residues can be removed easily and gently; the sleeve durability is positively affected

Cold coating of the well block mounting cone

MOLYPAUL® 900

• Wettability of the ceramic surface is reduced
• After use the components (sliding nozzles, porous plug) can be removed quickly and cleanly
• Adhering mortar release can be removed easily; the nozzle brick durability is positively affected

Hot-spraying on ceramic surfaces

After spraying, the product developed especially for this application, MOLYPAUL® 994, creates a dense, closed, dry lubrication film with a graphite structure tailored to the application. This decisively reduces the wettability of the ceramic component with respect to the grout/putty used. The efficient exchange of wearing parts is thus ensured.

Particular importance is attached to fine atomisation when spraying. The liquid content of the lubricant serves as a carrier material, which ensures the optimum distribution of the parting substances on the hot ceramic surfaces by spraying. The “Easy Spray Gun” manual spray gun is ideal for the application. No smoke or odours are generated during the application.

Areas of application

MOLYPAUL® 994

• Water-based solid lubricant, especially for spray application to hot surfaces
• Release function of the ceramic components, which are connected via mortar joints
• Application with a low-maintenance, pneumatically operated manual spray gun (Easy Spray Gun)
• Closed, low-friction lubricating film with high release effect is created

Spraying areas:

• Plate surfaces
• Ladle nozzle / exchangeable nozzle sealing surface
• Ladle nozzle brick holding cone / sliding sleeve and porous plug
• Tundish bottom nozzle / submerged entry nozzle
Coating of continuous casting moulds

The MOLYPAUL® products are easy to apply without drips. A self-contained lubricating film with excellent sliding properties is formed. The lubricant application enables the time-delayed use of the standard oil lubrication during the initial casting phase. The danger of deflagrations is minimised.

Continuous casting plant for billets and blooms

MOLYPAUL® 783
- Paste-like, non-dripping lubricant on a graphite basis
- Easy to apply
- A compact lubricating film with a low coefficient of friction is created under the influence of temperature
- Shell formations on the mould walls are effectively prevented
- Replaces the standard oil lubrication during initial casting; the danger of deflagrations is minimised
- Applied using fibre cushions or a fleece roller

Continuous casting plants for slabs and thin slabs

MOLYPAUL® 750
- Sprayable, ready to use and aqueous suspension
- Forms a resistant dry lubricating film on ambient-temperature with a high release effect
- Low coefficient of friction and high abrasion resistance ensure a smooth start-up of the dummy bar and protect the metal moulds against scoring and wear during insertion
- Service life of the mould is prolonged
- Applied using spraying apparatus, a fibre roller or a fibre pad

Release of fireproof ceramic products, casting templates and moulds

The MOLYPAUL® products can be applied without drips and enable clean demoulding. The moulded article remains free of unwanted discolourations and the mould is ready for the next use without the necessity for extensive cleaning. Multiple use of the casting mould is possible, since a new coating often doesn’t have to be applied before each use.

Release of fireproof ceramic casting products

MOLYPAUL® 959
- Cream-coloured liquid emulsion
- Non-hardening, non-dripping release layer forms
- No discolourations are formed on the ceramic moulded articles
- Usable on all mould materials
- Application with artist’s brush, fibre roller or spray gun

Release of casting templates

CEPLATTYN TL
- Sprayable, silver-coloured suspension of an oil emulsion with metallic solid lubricants with a high release effect
- Coating, for example of tundish templates, which are used in connection with ceramic dry setting mixes
- Applied using spraying apparatus with a high spraying performance

The MOLYPAUL® products are easy to apply without drips. A self-contained lubricating film with excellent sliding properties is formed. The lubricant application enables the time-delayed use of the standard oil lubrication during the initial casting phase. The danger of deflagrations is minimised.

FUCHS LUBRITECH – Special Application Lubricants

Innovative lubricants need
Experienced application engineers

Every lubricant change should be preceded by expert consultation on the application in question. Only then the best lubricant system can be selected. Experienced LUBRITECH engineers will be glad to advise on products for the application in question and also on our full range of lubricants.

The information contained in this product information is based on the experience and expertise of FUCHS LUBRITECH GmbH in the development and manufacturing of lubricants, and represents the current cutting edge. The performance of our products can be influenced by a series of factors, especially the specific use, the method of application, the operational environment, component pretreatment, possible external contamination, etc. For this reason, universally valid statements about the function of our products are not possible. Our products must not be used in aircraft/spacecraft or their components, unless such products are removed before the components are assembled into the aircraft/spacecraft. The information given in this product information represents general, non-binding guidelines. No warranty expressed or implied is given concerning the properties of the product or its suitability for any given application. We therefore recommend that you consult a FUCHS LUBRITECH GmbH application engineer to discuss application conditions and the performance criteria of the products before the product is used. It is the responsibility of the user to test the functional suitability of the product and to use it with the corresponding care. Our products undergo continuous improvement. We therefore retain the right to change our product range, the products and their manufacturing processes as well as all details of our product information sheets at any time and without warning, unless otherwise provided in customer-specific agreements. With the publication of this product information, all previous editions cease to be valid. Any form of reproduction requires express prior written permission from FUCHS LUBRITECH GmbH.
