

ATF's, CVT's & DCTF's

MOVING YOUR WORLD

TITAN transmission fluids have been carefully developed to meet the requirements of the specific friction coefficients for each gear setup.

Due to the wide range of ATF's no general classification has been established making the OEM specifications decisive for the industry. CVTF's are very similar to ATF's however since powerful hydraulic pumps are usually used in CVT transmissions, corresponding CVTF's must have particularly good foaming properties and good air release capability to prevent cavitation in the pump. DCTF's combine the properties of an excellent manual transmission fluid (MTF) and a high-performance automatic transmission fluid (ATF).
